Period fo	The MAILING DATE of this commun or Reply	ication appears	on the cover si	heet with the co	orrespondence ad	ldress		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The Specification does not disclose how thermal energy sources, heater elements, heat is directly radiantly energy. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 2 & 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamaguchi (US 6195115 B1).

Yamaguchi discloses the following claimed limitations:

- * regarding claim 1, a direct thermal printer/image forming apparatus/ (Abstract, fig 1);
- * a direct thermal print head having an array of thermal energy sources directly radiantly coupled to a thermal print medium (col 1, lines 43-45);
- * a thermal print medium drive mechanism/vertical scan means, four rollers, 4/ holding the thermal print medium/photosensitive material, 5/ in noncontacting proximity to the direct thermal print head without a thermal energy modulator interposed between the thermal print medium and the direct thermal print head (col 3, lines 2-12, fig 2);

Application/Control Number: 10/673,044 Page 3

Art Unit: 2861

* a controller/driver circuit, fig 3/ coupled to the direct thermal print head and the thermal print medium drive mechanism, wherein the output power of the thermal energy sources are individually controllable by the controller (col 4, lines 62-67, col 3, lines 1-5, 13-67, col 4, lines 1-15, figs 3 & 4).

- * regarding claim 2, wherein the thermal energy sources are lasers/EL, emitting light elements/ (col 2, lines 62-67, col 3, lines 1-5, figs 2 & 3);
- * regarding claim 6, wherein the thermal energy sources are radiant light device/ EL, emitting light elements/(col 2, lines 62-67, col 3, lines 1-5, figs 2 & 3);

Allowable Subject Matter

4. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments with respect to claims 1, 2, 4 & 6 have been considered but are most in view of the new ground(s) of rejection. Please see the above rejection Yamaguchi (US 6,195,115 B1); Yamaguchi discloses a color printer and head utilizing emitting elements to print images onto a photosensitive material.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Goto et al. (US 5,909,232) disclose a thermal recording system

Application/Control Number: 10/673,044 Page 4

Art Unit: 2861

for preheating a thermosensitive recording medium and method therefor. Nacman et al. (US 6,349,641) disclose a multiple diode imaging system including a multiple channel beam modulation integrated circuit. Shirota et al. (US 6,753,896 B2) disclose a laser drawing apparatus and laser drawing method. Takeuchi (US 6,791,594 B2) disclose a laser imaging apparatus. Rudi (US 6,798,439 B2) disclose a thermal recording by means of a flying spot.

Communication With The USPTO

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to K. Feggins whose telephone number is 571-272-2254. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Talbott Dave can be reached on 571-272-1934. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
